

Graham Watercolours

About the company

Graham & Co started making honey based watercolours in Oregon, USA in 1992 reviving a centuries old tradition. They are dedicated to making the best watercolours in the world.

Sweet little mystery...

Honey has been used extensively throughout the history of art as an ingredient in water based colours of all types. Graham & Co watercolours use honey as an essential ingredient in the binding medium. Honey was used in the 19th century by French colourmen and was then copied by English manufacturers. However, probably for economic reasons, manufacturers soon substituted the honey with industrial sugars. Honey loves moisture, so it absorbs water from the atmosphere. Its relative fluidity reduces the amount of water and glycerine needed. This means that more pigment can be used to create concentrated, brilliant colours enabling the artist to make smooth, even coloured, free flowing washes. Watercolour made with honey does not crystallize and will not harden in the tube even after months or years of disuse.

Graham & Co. watercolours will remoisten easily if left on the palette.

Watercolour painting selection

The watercolour set contains a selection of M Graham watercolours and all the accessories you need to start painting. The unique M Graham paints are made with honey giving stronger brighter colours. They never dry out on the palette making them extremely economical to use. The set is ideal for either a beginner or an artist wanting to try M Graham watercolours for the first time.
